PROFILE

Product-minded full-stack engineer with 4+ years of experience owning features end-to-end—from idea to deployment—across backend, frontend, and infrastructure. Thrives with minimal oversight in fast-paced, startup environments. Proficient in Node.js, React, PostgreSQL, Prisma, and AWS. Proactive about code quality, shipping frequently, and improving developer workflows. Strong communicator who collaborates closely across engineering, product, and design to build software that solves real problems.

WORK EXPERIENCE

Full Stack Developer

Adiyog Tech LLP, Noida   2024 – 2025

- Owned end-to-end feature development—writing server logic in Node.js, building React UIs, and managing PostgreSQL databases with Prisma ORM.
- Shipped on a rapid weekly cadence, proactively resolving bugs and edge cases as the first line of quality defense in a team without dedicated QA.
- Deployed services on AWS (EC2, S3), configured CI/CD pipelines, and set up logging and monitoring for production reliability.

Full Stack Developer

SiCierto.com — Remote (USA) — +1 (443) 891-5977   2023 – 2024

- Developed and maintained frontend interfaces using React and modern CSS frameworks, delivering responsive, accessible user experiences across devices.
- Built and optimized backend services, RESTful APIs, and database layers to support platform features, ensuring scalable and maintainable architecture.
- Collaborated cross-functionally to ship product features end-to-end, from technical scoping through deployment and production support.

Freelance Software Engineer

Fiverr & Upwork — Remote   2021 – 2023

- Independently delivered 50+ full-stack projects—wearing multiple hats across backend APIs, React frontends, database design, DevOps, and client-facing UX—with zero oversight.
- Improved dev workflows by implementing reusable scaffolds, automated deployments, and testing practices that reduced delivery time by 30%+ across repeat clients.

KEY PROJECTS

WhatsApp Chatbot Builder Platform

- Architected a full-stack SaaS product for automated WhatsApp chat flows—Node.js backend, React dashboard, PostgreSQL data layer, and WhatsApp Business API.

Telegram Bot Suite

- Built production-grade bots with automated replies, chat logging, and webhook architecture deployed on Vercel via FastAPI with structured error handling.
